

## New NissanConnect enhances customer infotainment experience in Micra

- **New NissanConnect infotainment system offers seamless and intuitive connectivity for Micra owners**
- **TomTom Premium Traffic navigation, Android Auto and Apple CarPlay all included**
- **Owners can plan journeys based on real-time traffic information**
- **TomTom's Door-to-Door Navigation app provides convenient end-to-end route-planning and over-the-air map updates**
- **State-of-the-art voice recognition technology now available in Nissan Micra**
- **Other Micra upgrades include electric rear windows and auto-dimming rear view mirror**

**PARIS, France** (July 16, 2018) – A new NissanConnect infotainment system with enhanced functionality is now available on the Nissan Micra supermini hatchback.

The benefit for customers is seamless and intuitive connectivity. Offering both Android Auto and Apple CarPlay, the new NissanConnect system allows users to plan a route before they leave their home or office. It uses real-time traffic conditions delivered via TomTom Premium Traffic navigation for highly accurate and optimised travel.

Owners can also send their destination directly to their car using the TomTom Door-to-Door Navigation app.

The Nissan Micra upgrade includes a new integrated touch-screen head unit, an enhanced display between the instrument cluster dials and revised steering wheel buttons.

The new NissanConnect head unit features a large seven-inch touch-screen – the same size as before – though now with fewer hard keys and new multi-touch capability. The home screen is fully customisable so users can set up short cuts for regular tasks. Android Auto and Apple CarPlay are standard on Acenta, N-Connecta and Tekna grades.

The instrument cluster display has been redesigned to show additional information when receiving phone calls or SMS text messages.

State-of-the-art voice-recognition technology has been added to the Micra, with voice commands accessed through the revised steering wheel buttons. Making phone calls, having messages read out loud or controlling music can all now be carried out by voice command.

The upgraded NissanConnect system features an improved navigation system. Intuitive new features include single-line navigation search functionality and multi-touch capability to zoom in and out of maps.

Users can set a destination on their smartphone when at home or in the office, send it to the car, then immediately start the route guidance when they get behind the wheel. Later, with Find My Car functionality, the vehicle parking point can be logged as users flip the navigation back to their smartphone to walk to their final destination.

The new NissanConnect system provides access to accurate real-time traffic information and provides on-the-go rerouting to minimise journey time. This service is free for five years, and transferrable to second and subsequent owners.

Over-the-air map updates are also part of the package, with four free updates a year for a minimum of three years. This is also fully transferrable to a later owner.

TomTom navigation is standard on N-Connecta and Tekna grades, and available as an option on Acenta.

The NissanConnect infotainment system is not the only element of the Micra which has been upgraded. Rear power windows are now standard on N-Connecta and Tekna, while optional on Acenta. An auto-dimming rear view mirror is standard on N-Connecta and Tekna. The design of the rear parking sensors has also been changed, with improved integration into the rear bumper.

### ABOUT NISSAN IN EUROPE

Nissan has one of the most comprehensive European presences of any overseas manufacturer, employing more than 17,000 staff across locally-based design, research & development, manufacturing, logistics and sales & marketing operations. Last year Nissan plants in the UK, Spain and Russia produced more than 640,000 vehicles including award-winning crossovers, commercial vehicles and the Nissan LEAF, the world's most popular electric vehicle. Nissan's Intelligent Mobility vision is designed to guide Nissan's product and technology pipeline and this 360 degree approach to the future of mobility will anchor critical company decisions around how cars are powered, how cars are driven, and how cars integrate into society. Nissan is positioned to become the most desirable Asian brand in Europe.
